Career Summary

Seasoned Project Manager and Engineering Manager in automation and control systems, safety engineering, transitioning into IoT, Industrial IoT and software development industry.

Combines in-depth technical expertise in industrial automation with modern full-stack development, programming skills in C++, Java, JavaScript, HTML5, CSS and working knowledge in IoT devices, sensors, microcontrollers and embedded systems and telemetry radio communication.

A team player with proven track record in managing cross-functional engineering teams, delivering complex projects for customers Singapore and the region. Experience in end-to-end project delivery starting from sales pursuit, scoping and proposal, design, engineering and development all the way to Factory/User Acceptance Test (FAT/UAT) and deployment/commissioning.

Technical Skills

- Full-stack Development with Java, JavaScript, VBA, HTML5, CSS, MySQL, NodeJS
- Microcontroller and embedded systems development with C++
- Frameworks & Tools: Spring Boot, ReactJS, Bootstrap, Git, GitHub
- IDE: Visual Studio Code, IntelliJ IDEA, Arduino IDE
- IoT & Electronics: Microcontrollers, embedded system, telemetry systems, sensors, LoRa Long Range radio, Meshtastic, GPRS/GSM/GPS modules
- Project Management: Microsoft Project, SAP
- Industrial Automation: Distributed Control System (DCS), Programmable Logic Controller (PLC), Human Machine Interface (HMI), SCADA and industrial communication protocols such as: Modbus Serial/TCP, Object Linking and Embedding for Process Control (OPC)

Professional Development

Jr. Full Stack Developer Boot camp (Oct 2025 – Feb 2026)

Conducted by Generation Singapore in partnership with Microsoft and Temasek Polytechnic

Graduated from the full-time 13-week boot camp successfully, acquiring the necessary technical skills and mindsets for software development roles.

Worked as a team member on a **capstone project** where my team developed [Voltara](#) web application for tutorial sharing of microcontrollers, IoT and robotics projects. In this project I completed the following tasks:

- front-end development with HTML, CSS, JavaScript and Bootstrap and
- back-end development where I set up the mySQL database for the project, created MVC packages and RESTful API endpoints with Java and Spring Boot.
- Carried out Frontend-Backend linking and ensured all portions are ready for presentation.

Other Professional Trainings

Professional Scrum Master training (2023)

Leadership training (2022)

ISO9001 training (2022)

Contract Management training (2021)

Professional Experience

Engineering Manager | A Top automation and control company in Singapore | Jan 2014 – Sep 2024

Project Manager | same company as the above | Jan 2007 – Dec 2013

Lead Engineer | same company as the above | Nov 2002 – Dec 2006

I started as a lead engineer where I led team of engineers to deliver complex Oil & Gas projects, involved in a full project lifecycle from design to testing and commissioning. Collaborated with cross-functional teams and conducted Factory/User Acceptance Tests (FAT/UAT) to ensure project success and client satisfaction.

- Achievements: As a lead engineer I completed all assigned projects successfully, consistently exceeding customers' expectations in project deliverables.

Promoted to a Project Manager position to manage project teams in project execution and project delivery. Responsible for scope, schedule, cost and quality metrics while supporting sales efforts and business development. Utilized Microsoft Project and SAP for project lifecycle management, including scheduling, cost estimation, and progress tracking. Facilitated management reviews and ensured seamless project handovers to customers.

- Achievements: As a project manager I exceeded project's KPIs in most of the assigned projects and I also obtained Project Management Professional certification.

Finally, I took on the role as an Engineering Manager where I led a team of 11-22 process safety engineers, overseeing engineering operations, training development, and performance management. Supported sales initiatives through technical proposals and competitive analysis while maintaining Functional Safety Management (FSM) system compliance across all projects. Managed departmental budget planning and participated in FSM and Quality Management System (QMS) audits to ensure internal process and regulatory compliance.

- Achievements: Established best practices in engineering processes and institutionalized measurable performance management system for the department.

Project Engineer | Another Top Automation and Control Company in Singapore | Jan 1997 – Dec 2002

Performed engineering functions to Distributed Control Systems (DCS) projects to Oil & Gas industry. Worked closely with internal teams, vendors and customers during design and engineering, testing and site commissioning.

- Achievements: persevered in all difficult and challenging projects.

Process Control System Engineer | A Gold Mining Company | Jan 1993 – Dec 1996

Maintained the plant-wide control systems for a gold mining company, configured new control loops, and conducted control system health checks. Provided operator training and maintained technical documentation for control systems.

Education

Junior Full Stack Developer | Feb 2026

Generation Singapore in partnership with Microsoft and Temasek Polytechnic

Bachelor's degree in electrical and electronic engineering. | 1993

Additional Professional Certification

Project Management Professional (certification expired in 2011), by Project Management Institute

Certified Functional Safety Expert (valid until 2026), by Exida, USA

Functional Safety Engineer (certification expired in 2011), by TUV Rheinland, Germany
